Hemanth **Kuttuboyina**

Portfolio

Contact details

@ hemanth4017@email.com
+91 9666397966
github.com/hemanth
Vijayawada, India

Technical Skills

Languages:
Python, SQL, C#, R

AI & Machine Learning:
Deep Learning, TensorFlow, Keras, PyTorch, Scikit-learn

Data Processing & Analytics
Pandas, NumPy, Matplotlib, Seaborn, Data Preprocessing, Feature Engineering

Tools & Deployment:
Jupyter Notebooks, Git, Docker, Cloud Computing Fundamentals, Node.js, MongoDB

Key Competencies

◇ **Problem Solving:** Ability to structure tasks in complex, autonomous environments.

◇ **Communication:** Skilled in presenting technical findings to non-technical stakeholders.

◇ **Impact-Driven:** Focused on using data to tackle energy transitions and business optimization.

Languages

English (Professional)
Telugu (Native)
French (Elementary A1)

Interests

Sustainability, Data Engineering, Game Dev.

Profile

I am a Computer Science student passionate about building intelligent systems through statistical modeling, machine learning, and data analytics. Currently driven by solving complex problems and deriving actionable insights from medical and real-world datasets to build future-ready AI solutions.

Experience

Full Stack Developer Intern **2025.05–2025.07**
◇ Engineered end-to-end web solutions and integrated RESTful APIs.
◇ Optimised data pipelines and backend logic for real-time applications.
◇ Collaborated in an agile environment using Git for version control.

Machine Learning Intern **2024.05–2024.07**
◇ Developed predictive models using Python and Scikit-learn.
◇ Conducted exploratory data analysis (EDA) to drive product insights.
◇ Implemented automated data preprocessing scripts to improve model training efficiency by 20%.

Projects

Arrhythmia Detection System **2026**
◇ Designed and built an advanced machine learning system utilized to analyze ECG (Electrocardiogram) signals for early cardiovascular anomaly detection.
◇ Cleaned and preprocessed massive arrays of time-series medical data utilizing Pandas and NumPy.
◇ Engineered a highly accurate predictive classification model utilizing TensorFlow and Scikit-learn algorithms to identify and classify specific variations of cardiac arrhythmias. Established a clean pipeline for data ingestion, training, and algorithmic inference.

Dynamic URL Shortener Service (System Design Based) **2025**
◇ Engineered a high-performance dynamic URL shortening service demonstrating robust capability in scalable backend architectures and dynamic data manipulation.
◇ Implemented real-time analytics tracking and high-speed data caching leveraging Redis and MongoDB for optimized latency.
◇ Built a secure Node.js/Express server-side infrastructure supporting custom aliases and automated QR code generation, demonstrating advanced software engineering capabilities necessary to build models into production.

Character Movement Systems (Unity/C#) **2025**
◇ Developed mobile-optimised scripts for complex character controllers.
◇ Implemented responsive input handling for varied screen resolutions.

Education

B.Tech in Computer Science (AI & ML) CGPA : 8.0 **2023–2026**
◇ Andhra Loyola Institute of Engineering & Technology.
◇ Focus: Deep Learning, Statistics, and Predictive Modeling.

Diploma in (ECE) Percentage: 77 **2020–2023**
◇ Bapatla Engineering College.
◇ Focus: Signal Processing, Circuit Design, and Numerical Methods.

Certificates

◇ **View My Certificates Portfolio (Google Drive)**
